Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper sealected cDNAs to prepare full-length cDNA libraries for trapper sealected cDNAs to prepare Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system-384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 175-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Science Center and Genome Science Laboratory in Riken Division of Experimental Animal Research in Riken contributed to

cervical dislocation followed by decapitation, the bullar was removed and opened in Leibowitz medium. The bony cappule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fastrack kit (catalog # K1592-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector Kit (catalog # 237211, Stratagene) and Uni-Zap XR digapack III Gold Cloning kit (catalog # 237612), both from Stratagene [La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Fth DNA polymerase and RNase H. Complementary DNA was blunt ended with Fth DNA polymerase, ligated with ECON I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over pharmacia Size Seps00 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Altro, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with ECON Lecombinants Stratagene's Exassist Interference resistence helper phage (catalogue # 211203) was adopted resistence believe pharmacia continue with the content of from 20 ul of saturated culture with the content of from 20 ul of saturated culture with the content of from 20 ul of saturated culture with the content of from 20 ul of saturated culture with the content of from 20 ul of saturated culture with the submaint server and since penetated with the submaint server prime of the phage primer (CAGAGAGCTARACACCTARACACCTARACACCTARACACCTARACACCTARACACCTARACACCTARACACC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Brieght Biggy terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTS and 20% are unidentified."

Sequence tag generated by 5, RACs of total RNA from gene trap ES

cell line. ES cell lines harboring insertion mutation of target

gene are available upon request from Sanger Institute Gene Trap

Resource. Annotation information available from

http://www.sanger.ac.uk/PostGenomics/genetrap/

Class: Gene Trap.
                                                                                                                                                                                                                                                                                             USDA, ARS, US Meat Animal Research Center

Single pass sequencing. Bases called with phred v0.020425.c and
trimmed with the aid of the trim_alt option. Vector identified with
cross_match v0.990329.
Plate: LAM8004 row: M column: 8
Seq primer: GTAATACGACTACACTATAGGG.

/clone_lib="Stanley Frontal SN pool 2"
/note="Organ: brain; Vector: pGR2.1-rOPO (Invitrogen);
Site_1: EcoR1; Total RNA (purified with Trizol and DNAsed
before use) was reverse transcribed using a modified
oligo-dT primer containing Real and HindIII sites.
Oligo-dT primer containing Real and HindIII sites.
Double- stranded cDNA was digested with Real, resulting in
blunt ended cDNA was gplit into two sets, one used as is as
the driver, the other set was split in half again and each
half linked to a different adaptor.
S'-TCGAGCGCCCCGGGCAGGT-3' or 5'-
AGGCGTGGTGCGAGGCGGT-3'), to be used as tester.
Subtraction was performed using the Clontech PCR Select
CDNA subtraction kit. Pool of two schizophrenics, male age
44 and female age 56 (S-116, S-118) subtracted by pool of
two mentally normal male individuals ages 41 and 53
(S-124, S-141). Tissues were obtained from the Stanley
Neuropathology Consortium (www.stanleylab.org). Library
constructed and subtracted by Dr. Nancy Johnston [(410)
614-3918, nlj@welchlink.welch.jhu.edu]."
